### Area Advisor— Enhancing small ruminant

### production to benefit farming families in Sindh and Punjab

Applications are hereby invited from suitably qualified & dedicated candidates with strong communication & interpersonal skills for livestock project entitled "Enhancing small ruminant production to benefit farming families in Sindh and Punjab, Pakistan" funded by Australian Centre for International Agricultural Research (ACIAR).

Position	Qualification	Salary (Rs /month)	Location
Area Advisor	Degree in Animal/ Veterinary Sciences	50,000/- negotiable according to successful applicant's experience (all inclusive)	Lahore

#### About the position

We are looking to recruit an enthusiastic "Area Advisor" to work on an internationally funded research project on small ruminant production and marketing in Punjab and Sindh. This role will involve undertaking field research on goat and sheep health and production to help to improve livelihoods of smallholder farming families in rural Punjab. The role involves working with an established team of young, dynamic veterinary researchers carrying applied, participatory research in collaboration with smallholder farmers and livestock value chain participants. Its aim is to describe the major constraints to goat and sheep production, health and marketing, and produce evidence-based recommendations and actions to help overcome these constraints to improve smallholder farm productivity and livelihoods. The project is actively extending its results through the small ruminant sector in Pakistan through direct contact with farmers and other sector stakeholders including government livestock departments, universities and non-government organisations.

The role is supervised by a project coordinator based in the office in Lahore, and will work closely with the existing Senior Area Advisor and Female Area Advisor based in Punjab, plus the Australian project leaders based in Melbourne, in a well-supported, collegial position. The position requires a practical working knowledge of small ruminant health and management. Key activities are:

- With the wider field team, carrying out collaborative field research into goat and sheep production and health in villages in Sindh alongside, including data and sample collection covering:
  - Animal production measurements
  - Collecting animal samples to assess health status
  - Collecting livestock marketing information from farmers
- Data recording, entry, checking and summary
- Conducting surveys and interviews with farming families and other livestock stakeholders, including value chain participants such as traders and service providers
- With the support of the rest of the project team, helping respond to farmer enquiries about livestock health and production problems
- Contributing to creation and delivery of farmer training and other extension activities that bring meaningful benefit to smallholder farmers through evidence-based improvements to their small ruminant farming
- Helping contribute to project communications, including stakeholder reports and scientific publications

The position requires travel to project field sites, currently including Chakwal, Bhakkar and Rajanpur plus occasional trips to the project working areas in Sindh.

#### Essential

- An awarded degree in animal/veterinary sciences from a HEC recognized institute
- Experience working with smallholder farmers, and goats and sheep in village farm settings
- Demonstrated ability to work as a part of a young, dynamic research team under limited direct supervision but with good technical support, whilst maintaining a positive collegiate working environment
- Excellent practical skills using Microsoft Word and Excel
- Excellent communication skills in Urdu, Punjabi and English

#### Desirable

- Previous research carrying out applied livestock research
- Experience managing large datasets
- Experience conducting farmer training or other farmer engagement activities

#### Please Note that:

1. Suitably qualified and experienced candidates are strongly encouraged to apply
2. The project runs until 30th June 2022. The position will have a probationary period for three months and is then renewable every 6 months depending upon satisfactory performance
3. Interested candidate should send a written statement directly addressing the selection criteria, their detailed CV, educational documents, and experience certificates at the following email address
4. Initial short listing will be based upon the application and short listed candidates will be invited for detailed interview online and at UVAS, Lahore.
5. All the application should reach before 15-09-2021 at the following address
6. No TA/DA will be admissible for interviews

Please mention the project and position on which you are applying for
